

Better Coverage. Lower cost.

MiniKin

A Kinetic Flotation Test of two times periods!

- It is a shortened version of a Aminpro simple kinetic test (SKT)
- Two concentrates are taken (0.75 and 8 minutes) and from them the kinetics is established for all the minerals measured in the test.
- It uses less sample (between 400 g to 1.2 kg).

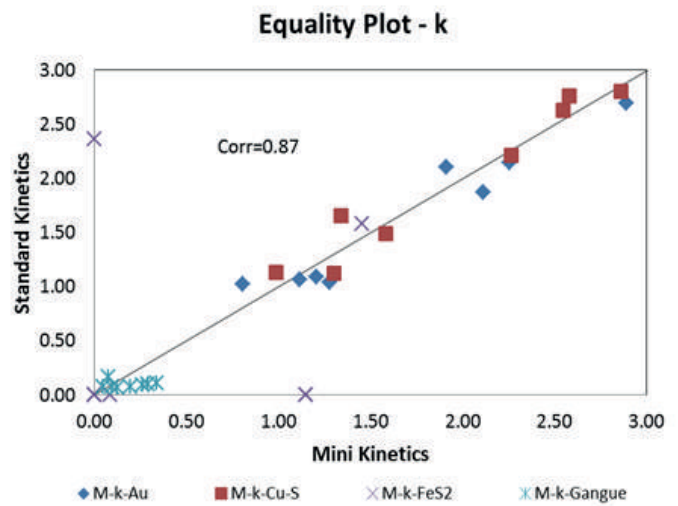

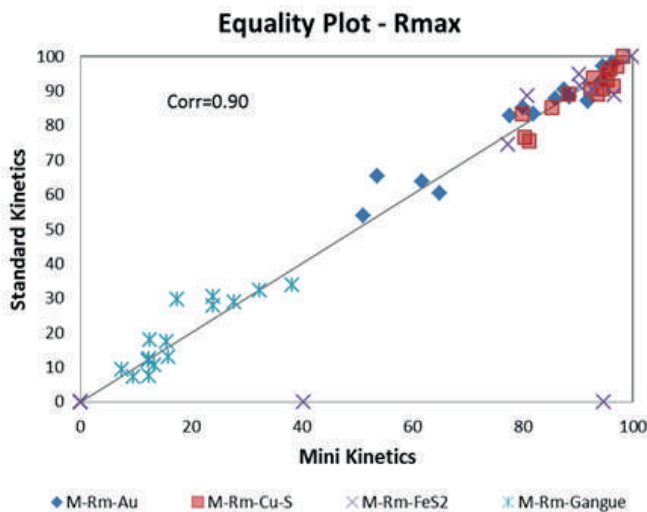

We can perform 14 MiniKin per day per flotation machine.

Ideal for forecasting, geometallurgy and mineplanning.

Protect your drill core

The MiniKin Test

The deliverables of this test include:

- Kinetic rougher of minerals (Rmax and k).
- Scalable to plant performance (Roughers).
- Concentrate and recovery grade (Rougher).
